Security at your fingertips

Total Privacy

Zero Storage: sovereign data only on your devices

An App designed specifically for the secure exchange of information between public safety operators on the road and the control room. A protected and, at last, sovereign ecosystem to receive, in real time, instant reports and alerts directly in the palm of your hand. Until yesterday, we relied on bots developed on TELEGRAM, where sensitive data, images and information inevitably passed through foreign servers; today, thanks to the new SELEA MOBILE App, reports no longer reside on any server but exclusively on the authorized devices of senders and of the designated recipients responsible for public safety.

PROTECTED COMMUNICATION

Communication is the beating heart of a security system.

In an increasingly digital operational context, speed in receiving an alert can make the difference between the success of an operation and a missed opportunity.

For the [Local Police](#) and Law Enforcement, managing public safety reports requires, however, not only speed, but also a framework of data protection without compromise.

It is with this in mind that Selea developed its new App, a strategic evolution designed to overcome the structural limits of messaging platforms.

Thanks to the SELEA MOBILE app and the CPS, information is routed in real time to authorized users based on territorial and functional jurisdiction criteria.

Until now, we have relied on BOTs developed on TELEGRAM: an immediate solution, whose data is nevertheless processed by third-party systems. Although this information is handled securely and encrypted, it remains outside the direct management control of the Public Administration, making the risk analysis required by the GDPR more complex.

Today, **the leap in quality is clear**. The technological heart of the new SELEA MOBILE app lies in "[End-to-End Encrypted](#)" communication through a secure connection service, without storing any sensitive data.

Information is readable only and exclusively on the authorized devices of senders and recipients. This approach guarantees top-level cybersecurity protection, eliminating the risk of data breaches and ensuring full compliance with strict privacy regulations and the GDPR.

That is why the new SELEA MOBILE app is the ideal solution for public safety operators to receive alerts and information in real time directly on their own smartphone or tablet.

Relying on the SELEA app means equipping the Police Department with a tool that not only enhances operational capability but also legally protects and technically safeguards the integrity of the managed data, turning collaboration among security operators into a protected, fast and finally sovereign ecosystem.

NEW

from TELEGRAM

SELEA APP

The SELEA MOBILE App
is free

You can download the App on Play Store, and soon on the App Store too.

the benefits of SELEA MOBILE

Zero Storage

No data on the web

However secure Telegram may be, it stores data on servers. The Selea App eliminates intermediaries: transits never touch the web and remain only on secure devices.

Security & Privacy

Protected information

Selea security: the new app turns sensitive data into encrypted data, visible only on authorized devices. Zero data breaches, maximum privacy.

New App

for smartphones and tablets

Real-time alerts and searches. Designed for the secure exchange of information between Local Police and Law Enforcement, in full compliance with data privacy and security.

CPS 7.0

Operations Center

Advanced platform that turns data into intelligence. It sends and receives data from the Selea app to ensure rapid response and prevention.

CPS Monitor

For those working on the

A solution for officers on the road who receive alerts for traffic-code violations, increasing operational speed and road safety.

CPS Manager

For Law Enforcement

Remote access that brings forces together Local Police and Law Enforcement save time and staff while ensuring rapid response and greater public safety.

“ + 100

Reports of stolen or blacklisted cars flagged every day on the SELEA app

“ + 2,000

Public Administrations that have chosen Selea solutions with no annual fees.

“ + 13,000

Public safety users in Italy who use the Selea app

LPR PORTAL MANAGEMENT

NO ANNUAL FEES

Some CPS features

RATED AS ONE OF THE MOST ADVANCED TOOLS FOR MANAGING LICENSE PLATE RECOGNITION PORTALS FOR URBAN AND ROAD SAFETY, TRAFFIC ANALYSIS, CRIME FIGHTING, AND THE PREVENTION AND SUPPRESSION OF OFFENSES

01

Search for vehicles with suspicious travel patterns

02

Search for identical registered owners who passed through with different plates at different times

03

Driver's license queries with impediments

04

Checking transits of cars registered to people residing on fictitious streets

05

Cross-referencing of mobile cell tower data

06

Ability to highlight municipal areas on the map

07

Customization of alarms on the Monitor

08

Integration with Municipia software for parking management

09

Integration with Verbatel

10

System access via PassKey, i.e. biometric MFA.

KEY STRENGTHS

CPS 7.0 strengthens investigations with AI algorithms that evolve over time: an investment-protecting solution that guarantees technological continuity, cost savings, and compliance with the new GDPR and cybersecurity regulations.

Road Safety

Ensures safer roads with real-time monitoring and instant alerts, for effective prevention and maximum operational speed on the road.

Urban Safety

Comprehensive protection of citizens through smart technologies that flag anomalies and hazards across the territory, raising crime prevention.

Traffic Analysis

Advanced analytics turn traffic monitoring into a resource for smart cities, optimizing mobility and urban livability.

Investigations & Prevention

A solution that outperforms any other in investigation, enforcement and prevention thanks to advanced features for finding accomplices and flagged or fictitious vehicles.

Collaboration ACROSS AGENCIES

Secure, reciprocal exchange of information between Local Police and Law Enforcement, guaranteed by a platform in full compliance with data privacy and security.

Multi Brand

Supports all cameras on the market. Unifies and centralizes different systems, offering simpler and more effective management.

Certifications

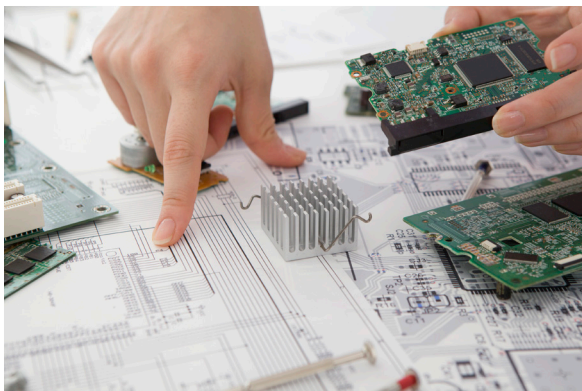

Nothing has been overlooked, starting with the data protection guaranteed by the Privacy by Design and Privacy by Default certification of the entire Suite, and by the certification of the National Cybersecurity Agency (ACN) for those who want cloud access managed by the Ministry

ISDP 10003

Designed with security in mind, following the principles of Privacy by Design and Privacy by Default for maximum data protection.

ACN - CLOUD National Cybersecurity Agency

ACN-certified cloud infrastructure: full compliance for the secure management of sensitive data for the Public Administration

THE GROUP

TTM TECHNOLOGY

TTM Technology brings together three companies specializing in the production and development of AI cameras, software and integrated, innovative technologies for license plate recognition, access control in restricted traffic zones (ZTL) and advanced video analytics.

A unique technology partner alongside public authorities, local police and system integrators, making cities more accessible, safe and smart.
