

SOFTWARE SOLUTION

CPS Manager

Law Enforcement Solution

IT GIVES LAW ENFORCEMENT AGENCIES CONTROL OF THE AREA

Centralized solution that allows law enforcement agencies to connect to all the number plate reading systems in the area, from a single location in order to provide immediate and effective integrated security.

How it works

CPS Manager is a software platform designed exclusively for Law Enforcement. It gathers all the information about vehicles under investigation from existing number plate reading systems (throughout the country) in a single location. The software creates a secure and encrypted communication channel between the number plate reading systems throughout the country.

When a vehicle in the private black list passes the LPR camera in any of the number plate reading systems, CPS Manager reports the transit in real time (also to smartphones) and traces the route of the vehicle.

CPS Manager allows you to access all the number plate reading systems throughout the country simultaneously from a single location. Because it is connected with the various systems, CPS Manager can be used to extrapolate information about all the transits that took place for a specific vehicle, saving time both for Municipal Police and for Law Enforcement Agencies.

Benefit

The strength of this solution is to:

- ▶ Ensure effective countrywide security from a single location.
- ▶ Prevent crimes such as theft and robbery.
- ▶ Uncover illegal activities, dummies and accomplices.
- ▶ Make the Law Enforcement Agencies independent so that they can extrapolate transit information from the authorized systems from a single workstation, without having to request the information each time for each installation in the country.
- ▶ Forward alerts regarding suspect vehicles included in the private black list in real time to Law Enforcement Agencies.
- ▶ Ensure public safety, but also that of public safety personnel (including Municipal Police) involved in outdoor surveillance activities.
- ▶ Make the work of Municipal Police easier by extrapolating transit information requested by Law Enforcement Agencies.

The solution also allows Local Authorities to maximise their investment of public funds spent on video surveillance by promoting communication and cooperation between the Local Police and the Investigative Units, which means greater public security and lower costs for the public administration.

About us

SELEA is specialized in the manufacture of number plate reading solutions, both for vehicle access control and for territorial security and traffic control. All of our products are developed and manufactured entirely in Italy. This means that our customers benefit from continuous and comprehensive technical support.
